Your Lawn Can Be Beautiful!

START YOUR LAWN THIS WAY

Be sure that the soil has good drainage and that the seed bed is fine, smooth, and mellow. Careful consideration should be given to the kind of seed to be used. The cost of the seed represents the smallest part of the investment. It is false economy to save a few cents by purchasing lawn seed from a questionable source, only to be annoyed later by repatching a weedy turf or being required to do the entire work over.

Select a calm day and sow half the quantity one way and the remaining half at right angles. Seed at the rate of a pound to 200 square feet on new lawns or 125 to 150 pounds per acre. It requires about half as much seed for an established lawn. A thick sod is the best protection against weeds. The seed should be covered by light raking and a top dressing of peat moss or humus. The lawn is then ready for rolling. If watering is necessary, use a fine spray to prevent washing.

Facts Concerning Late Summer and Early Fall Sowing

The cool, moist weather of late summer and early fall affords an ideal condition for renovating or rebuilding a lawn that has suffered from drought, neglect, or the ravages of crab grass or other weeds. This is also the ideal time for building a new lawn. Seed sown at this time will show quicker growth and has a tendency to stool or spread out, a condition not present during the warmer months. Competition with weeds is practically eliminated at this season, since they will not germinate until spring, by which time the grass is thoroughly established. Seed may be sown successfully as late as November in the latitude of Cincinnati, but we would recommend September for best results.

ACME SUPERFINE LAWN SEED

As the name implies, this mixture is the finest that modern seed-cleaning machinery can produce. Over 99.90 per cent free from weeds. It contains only the plump seeds which produce the strong healthy plants. It is a scientific combination of extra-heavy Kentucky Blue Grass, Fancy Red Top and Creeping Bent. CROCUS

Spring-Flowering Crocus

Crocus are frequently the first flowers to appear in spring, coming a few days after the snow disappears. They are at their very best when scattered over a lawn or planted in rows as a border for a bed of perennials. When used on the lawn, scatter them freely over the surface, then lift the sod with a trowel and slip the bulb underneath. Crocus may also be grown in pots or bulb pans and will produce a pleasing effect. The bulbs are entirely hardy, and the grass may be mowed without injuring the Crocus plants.

Miscellaneous BULBS

CHIONODOXA (Glory-of-the-Snow)

An early-flowering spring bulb, very desirable for use in borders or rockwork. The charming, small, star-shaped flowers are borne loosely on a small spike 4 to 5 inches long, and are of an attractive blue color. The bulbs should be planted about 3 inches apart. If planted in masses, close together, where they may be left undisturbed, they will continue to improve year after year.

Gigantea. A striking variety with unusually large, lilac-blue flowers with a conspicuous white center. 50c per doz.; \$4.00 per 100.

ERANTHIS HYEMALIS (WINTER ACONITE)

Early in the spring the golden blossoms look charming, resting on an emerald-green cushion of leaves and forming a striking contrast to the snowdrops, scillas, and chionodoxas. The foliage remains long after the flowers, making the plant especially valuable in moist situations, such as under trees, which the Winter Aconite enjoys and where few other flowering plants will thrive. Plant firmly, 2 inches deep, about fifteen bulbs to the square foot. 55c per doz.; \$4.25 per 100.

FRITILLARIA

Meleagris. Single, dwarf, spring-flowering plants, bearing large, pendent, bell-shaped flowers of yellow, white, black, purple, striped, and splashed and checkered in the most curious way. They are invaluable for rock-gardens and pretty when grown in large groups in a dry situation. 55c per doz.; \$4.50 per 100.

GRAPE HYACINTH (Muscari)

Charming, hardy spring-flowering bulbs. They are somewhat like the Hyacinth, but the clusters and the individual flowers are smaller and of delicate shape. Invaluable for naturalizing, especially with Narcissus.

Early Giant. Clear bright blue; large; early. 50c per doz.; \$4.00 per 100.

Alba. A pure white form of the above. 60c per doz.; \$4.50 per 100.

SCILLA CAMPANULATA (WOOD HYACINTH)

This interesting class blooms during early May. The bell-shaped flowers are carried on slender, graceful spikes. Plant 3 to 4 inches deep and 6 inches apart. Very effective for borders and will thrive in shaded situations under trees.

Excelsior. Large; deep blue bells; tall, large spikes. 50c per doz.; \$4.00 per 100.

Rose Queen. Bells are soft lilac-rose. Very pretty. 50c per doz.; \$4.00 per 100.

White Queen. Pure white. 50c per doz.; \$4.00 per 100.

SCILLA (Harebell)

Very early-flowering bulbs, doing well in ordinary soil, producing fine, graceful spikes of bell-shaped flowers. Extremely showy and attractive as pot plants and require about the same treatment as hyacinths.

Sibirica, Spring Beauty. Striking, large clear blue, much larger than Sibirica. 50c per doz.; \$4.00 per 100.

SNOWDROPS (Galanthus)

Everybody knows the Snowdrop, with its little white bells coming through the snow very early in the spring—practically the first flower to show itself after the dreariness of winter. It is a wonderful bulb for naturalizing and planting in every garden. Plant 2 to 3 inches deep and 1 inch apart. Can also be grown in pots or baskets.

All varieties of Tulips offered on this page are imported DUTCH BULBS. Our bulbs are Mammoth Top Size, measuring 12 cm. and up, and will produce the largest flowers possible. Top-size bulbs measuring 12 cm. and up are not to be confused with so-called first-size bulbs that measure only 11 cm.

COTTAGE TULIPS MAY-FLOWERING

The name "Cottage" is favored, for their garden beauty, adaptability to home ornamentation, color range, fragrance, texture of bloom, fine-shaped flowers and long stems are among their good qualities. Their graceful form, beautifully shaped trumpets and cups, and the long, straight stems have made them favorites for cut-flowers purposes.

Plant in soil in pots or bulb pans. Plunge in coldframes or place in cool basement. When well rooted bring into conservatory or greenhouse or place in sunny window in a cool temperature.
